

This is a cost-effective sound system for a small church. There are three groups of microphones: platform, choir and sharing. The volume of each group is adjustable through user controls on the RDL RU-MX5 main house mixer. The RU-MX5 also provides volume control for the preacher's wireless mic and for an auxiliary audio source, such as a CD or tape player. The RDL STD-600 sends the final audio output to two amplifiers, one for the sanctuary speakers and one for the fellowship hall. Depending on the desired level of user accessibility the RU-MX5 may be mounted in a wall, in the pulpit or in a small secured equipment rack.
